

#	Issue	Comments
	Readme	
1	Add a command to clone a project	There should always be a command in the readme file to clone the project so that any user knows how to copy your project.
2	It is not clear where it needs to change the Password and Username	The customer will not climb the project (especially if it has a lot of tests and pages). Therefore, we add the path to the file in which we need to enter our data.
3	No command to run Cypress GUI	Commands to run the project in the headed and headless modes need to be added
4	The readme file has no title for project's features	
5	The readme file has no info on how to generate allure report or open it locally	
6	The readme file has no link to github pages	
	Pages	
1	The variables and classes naming issues	1. Use the camelCase correctly, when naming the variables (signoutLink -> signOutLink) 2. Use the PascalCase for the class names (loginPage -> LoginPage)
2	loginPage.ts	To remove "emailId: string" and etc, add "noImplicitAny": false in " compilerOptions " in "tsconfig.json"
3	Line 4	signinLink should belong to the main page which will be inherited by other pages
	Gitignore	
1	.gitignore not being used correctly	1. Repeat folder names (reports/** and reports) 2. cypress/downloads doesn't exist 3. videos and screenshots folders already in reports folder
	Test	
1	Tests need to be numbered	Add numbering to tests, because the lack of numbering leads to confusion
2	Delete unused imports	
3	MyAccount.test.ts is an irrelevant test	The Test does not test declared functionality. Instead, a dummy test is used.
	login.test	
1	Line 12	Test values are not injected into the main code, they must be transferred to a helper or fixtures
2	It("login with valid credentials") can be removed since it('login with valid credentials read data from fixture') perform exactly the same functions	Repetitive tests are a sign of ineptitude
3	In each of the "it" description "read data from fixture" can be removed	No need to repeat the same thing in test descriptions, it shows ineptness
4	Lines 14,15,20,21	Lines contains irrelevant code (the checks do not correspond to the tests purpose)
5	Line 34	Does not have a new line before password argument like in previous tests
6	Line 35	Wrong error message ('Invalid email addressssss.')
	users.json	
1	Wrong data name	Naming variables " invalid_password " and " invalid_email " Is incorrect if the array is similarly named " invalid_credentials "
2	Fixtures file contains duplicated test data. The structure of the test data is overcomplicated	File contains duplicated test data. The structure of the test data is overcomplicated

	Project structure	
1	Docs folder contains useless files	Everything in the docks folder is generated by the command "allure:generate"
2	config.config.ts is incorrectly named	Better to name this file cypress.config.ts
3	commands.js and e2e.js	The same .ts files are created after running the command "npm i"
